

**Mattson
Macdonald
Young** structural engineers

Cathy Beck, Engineering Technician

Cathy just recently joined MMY, but has worked in the field of structural drafting since 2002 on all sizes of projects. She enjoys working on large PT projects to wood housing projects. In the past she has also worked on airport additions, existing building renovations, school and church additions and warehouses.

Cathy works well in Revit Structure and in the past has worked on company standards and building family libraries. To her, drawing a building is like putting a puzzle together and she loves to see how it all fits and works. She notices the structure in everything she sees and is always wondering how something is put together and standing up.

Education

Associate of Mechanical Drafting
Ridgewater Community College, 1977

Cathy loves to travel in her RV with her husband Jeff, and they both like hiking and backpacking as well. Getting off the main trail to find solitude is where you can find them. When home she loves spending time with her grandchildren and family.
