

**Mattson
Macdonald
Young** structural engineers

Melissa is a country girl at heart who loves being outdoors. When not deciphering the scribbles of engineers at the office, she enjoys spending her time with her husband, son, and pets. She loves exploring parks and trails, camping, canoeing, and especially gardening. She also enjoys tickling the ivories.

Melissa Breiter, Engineering Technician

Melissa joined MMY in 2006 as an Engineering Technician. She uses Revit Structure and AutoCAD to create 3D structural models and construction documents. As the BIM Manager at MMY, Melissa is responsible for developing and documenting company standards for Revit Structure. She actively maintains the company template and loves finding ways to improve it. She assists with project coordination as needed on Revit projects and provides training, software support, and troubleshooting for Revit Structure and AutoCAD users in the office.

Melissa enjoys the wide variety of projects we work on at MMY, including everything from sculptures and park shelters to houses, apartments, offices, and large warehouses. She also enjoys going out to jobsites to learn about construction methods and see work in progress.

Education

Bachelor of Arts in Environmental Studies – University of Minnesota Duluth, 2001

Associate in Applied Science in Architectural Drafting and Design – Hennepin Technical College, 2006
