

**Mattson
Macdonald
Young** structural engineers

Adam has always liked to build things - his first "project" was at age six when he repurposed an electrical can opener into a fan in his parent's basement.

An engineering career was the natural choice where he could use his creativity, drive and penchant for exploration to build things.

In his spare time, Adam is a craftsman and a collector of tools. From traditional woodwork and joinery to making parts and pieces on his metal lathe, he's always making something.

When not making things, he enjoys hiking, camping, foraging and spending time with his wife.

Adam Neigebauer, P.E.

Adam has a diverse background including Surveying and Civil Engineering, and most recently as a Restoration Engineer at a local consulting firm. There he gained experience in restoration procedures and products along with considerable project management experience.

Adam has experience in a wide range of projects including historical rehabilitation, single and multi-family residential, commercial, industrial, and renewable energy projects. He enjoys creating practical and economical designs.

Education

Bachelor of Science in Civil Engineering, Structural Emphasis
University of Minnesota, Twin Cities, 2004

Registration and Memberships

Licensed Professional Engineer, Minnesota
